Hi Wendi and Bowen,

Week 9 at ANU mainly consisted of finalising current works to get ready for the coming final weeks. Our team is dedicating our time on completing the report, poster and the prototype. Furthermore the final audit (Audit 3) is scheduled on the 9th of May, from 4PM to 6PM.

1. Analysis of the feedback
- Feedback from client meetings was reviewed and the changes were implemented.
- Updated the Report with slight changes in structure. Included more market research. [1]
- Decisions made within the team can be viewed within the Google Drive document. [2]

2. Progress over the week
- The report was completed and is up to date with the clients' specification. [1]
- The prototype was completed. [3]
- Multiple versions of the poster were made giving us options for the audit. [4]
- The system architecture diagram was finalised. [5]
- The Google Drive and GitHub were organized for the final audit. [6]

3. Plans over the next week
- Upload the prototype code on GitHub.
- Create prototype summary.
- Complete system architecture summary.
- Finalise and choose a (the best) poster.
- Finalise market analysis.

Kind regards,
Woojin Ra
